

Rebecca Mutek

PROFILE

Rebecca is a front-end developer at Essentra working mainly with JavaScript, CSS and HTML. She wishes to use her programming and problem solving skills to work for a company that develops impactful user solutions and is passionate about technology.

PROJECT

Oy'ster

Oy'ster is a social network for individuals who love, enjoy and are enthusiastic about oysters. Users can post reviews, browse restaurants, find oyster specific specials and receive recommendations. Restaurant roulette is a feature which asks the user for several parameters and then matches them with a restaurant and a specific oyster. As users post reviews they become eligible for exclusive events and special offers.

Oy'ster was built using Ruby on Rails and VueJS. Oy'ster was created to share and track oysters enjoyed over a lifetime for those who like to live life on the half shell.

Visit Oy'ster at <https://shrouded-basin-69875.herokuapp.com/>

(Please note that several bugs are still being worked out and I am happy to demo the application locally on my laptop)

EXPERIENCE

Front-End Web Developer

Essentra | Chicago, IL | December 2017 - Present

- Responsibilities include: management and execution of website development, design and reporting
- Rebuilding one of the company's e-commerce websites and implementing mobile responsive functionality
- Utilizes strong troubleshooting and debugging skills to proactively address errors and implement new features
- Collaborates closely with graphic designer to create thoughtful and clear user interfaces

Full-Stack Web Developer

The Difference Engine | Chicago, IL | June 2017 - December 2017

- Developed an e-commerce web application for a local business in an agile environment. Stack included Ruby on Rails, React and Stripe API
- Used Trello to organize backlog, sprints, code in development, code under review, code ready for demo and deployed
- Exercised communication and consensus building skills when developing in a team environment to ensure all team members understand the various features being created simultaneously
- Wrote Rspec tests to challenge each piece of code before pushing to Github

Full-Stack Web Developer

Actualize | Chicago, IL | January 2017 - May 2017

- Attended a 17-week full-stack web development training learning Ruby on Rails, JavaScript, CSS, HTML, VueJS and SQL
- Contributed to a team resume app project by using an API our team created to pull data into a resume webpage; used VueJS and a Wrapbootstrap theme to display the data
- Learned to pair program
- Built a fully functional web app, Oy'ster

Senior Broker

Aon | Chicago, IL | July 2014 - November 2017

- Responsibilities included project planning which includes collaborating with interdisciplinary team members and clients to establish goals and objectives specific to each client needs
- Proactively updated clients with project timelines and welcomed feedback to ensure desired results were achieved within the predetermined deadline
- Prioritized workflow to ensure all project components are complete before deadlines
